ORIGIN AND BREEDING HISTORY OF THE VARIETY

'FFR 373' originated from a cross of 'Williams 82' and 'Pella'. The initial cross was made at Battle Ground, IN in 1982 and the F_1 generation was grown in a greenhouse at Lake City, SC in the winter of 1983. The early generations of 'FFR 373' were developed using a modified single seed descent selection method. The F_2 generation was grown at Brookston, IN in 1983 and the F_3 generation was grown the following winter in Chile. Single plant selections were made in the F_4 generation at Brookston, IN in 1984. In 1985 individual F_5 observation rows were planted and harvested at Brookston, IN.

'FFR 373' was first tested in replicated preliminary tests in 1986 at five locations. It was tested in a seven location advanced trial and preliminary seed increase was begun in 1987. 'FFR 373' was tested at six locations in 1988 and breeder seed was grown at this time. Further testing was conducted in 1989 at six locations.

'FFR 373' was first checked for uniformity and stability in the F_5 generation and subsequently in the F_7 , F_8 , and F_9 generations. During these observations the variety was shown to be uniform and stable. Since the establishment of breeder seed in 1988 and in each subsequent year of breeder seed production the variety has been uniform and stable. 'FFR 373' is essentially free of contaminants at the present time.

NOVELTY STATEMENT

'FFR 373' is most similar to the variety 'Williams 82'.

'FFR 373' differs from 'Williams 82' in the following characteristics:

1. 'FFR 373' has purple flowers while 'Williams 82' has white flowers.
2. 'FFR 373' has 1.3 gm/100 seeds larger seed than 'Williams 82'.

ADDITIONAL DESCRIPTION OF VARIETY

'FFR 373' is a late group III soybean variety. It has purple flowers, brown pubescence, tan colored pods, yellow seed, and a black hilum. 'FFR 373' has combined the Rps1-k gene for resistance to Phytophthora root rot and excellent lodging resistance. With these characteristics it is extremely well adapted to the area where late group III soybean varieties are grown.
